DETAILED ACTION

1. Claims 1- 5 were presented for examination.
2. Claims 1-5 are rejected.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-5 are rejected, under 35 USC 102 (e) as being anticipated by Kermani (US 6895514 B1).

Regarding claim 1, Kermani discloses a method of authenticating a user comprising the steps of:

providing, by the user, a unique identifier, the unique identifier comprising both a sequence of keystrokes and the inter-keystroke intervals associated with provision of those keystrokes (Col 3, lines 20-40; ; key stroke sequence; user's password)

comparing the unique identifier provided by the user with a reference unique identifier by:

comparing the absolute inter-keystroke intervals of the unique identifier with the absolute inter-keystroke intervals of the reference unique identifier and returning a true indication if the absolute inter-keystroke interval of the unique identifier is within a predetermined tolerance of the absolute inter-keystroke interval of the reference identifier (Col 3 line 20 to Col 4, line s 25; key stroke sequence; intervals);

comparing the relative inter-keystroke intervals of the unique identifier with the relative inter-keystroke intervals of the reference unique identifier and returning a true indication if the relative inter-keystroke interval of the unique identifier is within a predetermined tolerance of the relative inter-keystroke interval of the reference identifier (Col 3, starting at line 40; Col 5, lines 1-30; threshold values);

authenticating said user if both said absolute comparison step and said relative comparison step return a true indication (Col 3, lines 20-40).

Regarding claim 2, Kermani discloses a method , wherein said relative inter-keystroke intervals are the ratio of the inter-keystroke intervals and the inter-keystroke interval between entry of the first of said sequence of keystrokes and the second of said sequence of keystrokes (Col 3 line 20 to Col 4, line s 25; key stroke sequence).

Regarding claim 3, Kermani discloses a method further comprising the step of entry by the user of the reference unique identifier and wherein said predetermined tolerance is determined during said step of entry by the user of the reference unique identifier (Col 2, lines 20-50; Col 3, starting at line 40; Col 5, lines 1-30; threshold values).

Regarding claim 4, Kermani discloses a method wherein said predetermined tolerance is explicitly set by the user (Col 3, line 20 to Col 5, lines 1-30; decision circuit at user machine).

Art Unit: 2136

Regarding claim 5, Kermani discloses a computer program comprising computer program code means adapted to perform the steps of any one of claim 1 to claim 4 (Col 3 line 20 to Col 4, line s 25).
